

# IAM - Identity and Access Management

"Managing identities and controlling access to resources in order to let customers create a safer working environment and empower digital trust"

## IAM in action

### Major challenges faced by companies

- Implement user lifecycle process automation and access governance.
- Need to delegate user rights decisions to operational staff.
- Comply with market regulations and be able to prove it through audit enablement and detailed reports.
- High security requirements, with strict segregation of duties (SOD) management.
- Need for a web single sign-on (SSO) across several applications, with adaptive authentication depending on the security level required and based on the user rights policy.
- Avoid password fatigue by replacing passwords as main authentication.
- Emergency access with a self-service password reset feature.
- Save time and decrease helpdesk costs with password reset.
- Access from smart devices without changing applications configuration (non-intrusive).
- The solution must be multi-site capable with 24x7 access.

### Benefits

- Automated user lifecycle management based on reliable identity sources.
- Accurate management of user rights performed by operational staff.
- Monitor compliance with the security policy regarding the target applications.
- Toxic combinations eradicated, reducing risks.
- Enhanced security with reinforced password policies and identity governance.
- Web access and single sign-on to enforce access security and increase user productivity.
- Reduced helpdesk costs with self-service password reset.
- Improved user experience with non-intrusive technology.
- Reporting capabilities for administrators, internal audit, and regulatory compliance.

### Solution

- Evidian IAM suite provides comprehensive, modular, and flexible identity solutions that are proven to answer the requirements of any industry & company.

# Evidian IAM Suite

Our IAM solution is recognized by customers and analysts for its completeness. The Evidian IAM Suite offers the following components that can be deployed independently or combined.

Installed at your company or hosted by Atos (managed services) :

## Evidian Identity Governance and Administration

allows rights governance and full lifecycle management of identities and access to applications, driven by a security policy combined with approval workflows.

## Evidian Web Access Manager

provides secure, policy-based authorization, identity federation, web SSO and multi-factor authentication.

## Evidian Enterprise Access Management

- **Evidian Enterprise Single Sign On** to access to enterprise and personal, on-premise and Cloud applications from workstations and mobile devices, freeing users from password constraints.
- **Evidian Authentication Manager** provides strong authentication to Windows workstations and mobile devices: smartcard or token, X509 certificate, contactless RFID cards, biometrics and one-time password.

## Evidian Analytics

enables raw data from Evidian's IAM Suite to be collected and transformed into value added information for the company in the form of dashboards, views, and reports.

## Evidian Safekit

brings high availability and load balancing to applications.

Instantly available in the Cloud, as a subscription with:

## Evidian IDaaS Access

provides identity federation, authorization, web authentication & web SSO, preconfigured SAML applications, native mobile apps protection and API protection in the form of software as a service.

## Evidian Analytics as a Service

enables raw data from Evidian's IDaaS solutions to be collected and transformed into value added information in the form of software as a service.

Available soon :

## Evidian IDaaS Governance

provides advanced user lifecycle management process, security policy definition and provisioning of Cloud applications.

Evidian solutions are the cornerstone of "Zero Trust" strategies, as they provide a comprehensive set of features to support and prepare organizations to align their IAM and Cloud strategies, with Zero Trust in mind.
