# **Orbion Access & Governance**

**Evidian Identity & Access Management**

# The unique convergence of an Access and Governance SaaS solution, including advanced AI-driven features

## Evidian Orbion Access & Governance

A comprehensive identity and access management solution as a service with: an expedient user on-boarding procedure, dynamic user life cycle and access management, governance capabilities, identity federation, bleeding edge multi-factor authentication (MFA) and Single-Sign-On (SSO).

### Generative AI

Evidian Orbion introduces advanced AI-driven features, such as a generative AI (GenAI) chatbot to streamline users and administrators' operations. It also provides access to documentation and offers comprehensive guidance on task execution. Most importantly, Gen AI will save you valuable time by enabling execution of administration actions expressed in natural language and implement security policy rules.

### Strengthen security

Evidian Orbion Access & Governance guarantee data confidentiality, prevent session & identity theft, and ensure trust in protecting information streams. Self-service authentication methods enrollment is also available.

### Increase Productivity

New users obtain the rights they need for their job rapidly. When a user joins, moves or leaves, their profiles are automatically adjusted. Users can request additional rights as roles or requirements change. Evidian Orbion allows users to connect from anywhere whilst enjoying a user-friendly experience.

### Enhance the user experience

Providing a highly customizable standalone portal or the capacity to integrate into pre-existing corporate portals with the Evidian Connect SDK. The navigation menu is dynamically generated to display the right Web resources associated with a specific profile.

### Powerful Security Model

Evidian Orbion facilitates multi-dimensional object relationship management by establishing links between users, account owners, approvers, organizations, and other entities. It supports various identity types, including personas that span multiple identities and devices. Roles, applications, and services can be accessed through catalogs, enabling the definition and update of rights for all identities, with the ability to manage changes over time.

### Centralize Identity Management

Identify and manage all users based on the need to access applications. Ensure employees, subcontractors, partners, and customers have only relevant access rights.

### Support Identity Federation

It is possible to control who accesses IT resources while delegating partner identity authentication to an external identity provider (IdP). The solution supports SAML (Security Assertion Markup Language) 2.0 and OpenID Connect as well as OAuth 2.0 for Single Sign On (SSO), identity federation and authorization control. Users can also be provisioned between trusted domains in more complex business environments involving partners and affiliates.

### Strong Authentication

Strengthen security with robust multi-factor authentication (MFA). Evidian Orbion offers strong protection against phishing attacks, credential theft, and unauthorized access by supporting a wide range of authentication methods, including one-time codes, mobile authentication, Evidian Push Authentication, passwordless authentication, the latest FIDO 2 framework, and third-party authentication delegation (via Radius, SAML and OIDC).

# Evidian identity and access management as-a-service

**“Evidian Orbion is a comprehensive IDaaS solution covering all major areas of IAM. It stands out by delivering a wide range of innovative capabilities, especially around integration of decentralized identities, efficient application onboarding, and by the flexible data model supporting identity relationship management.” (Kuppinger Executive View, September 2024)**

## Make the user the actor of identities and rights

Business-oriented workflow processes, allow users to manage their own identity and rights life cycle through account review processes.

## Ensure compliance with the policy

Enforce and verify policy on target systems. Create or delete rights based on IT resource requirements, in compliance with the access policy. Implement continuous control to detect and reconcile differences between the required policy and the effective rights in the applications.

## Enable Self-Service

Orbion allows each user to self-manage their accounts.

Evidian Orbion Access & Governance is one key element among others to comply with data regulation laws. The dedicated personal data dashboards and self-service functionalities allow users to exercise their rights freely and enable GDPR\* compliant processes.

\*General Data Protection Regulation

## Delegation

Ad-hoc delegation, such as a temporary delegation of privileges during manager’s vacation can complement static delegated administration. Such a manager could nominate a deputy that would receive some of manager’s privileges. This is all done on an ad-hoc basis, initiated by an explicit action of the manager.

## SOD

A Segregation of Duties (SoD) policy prevents any individual from accumulating conflicting responsibilities. This is typically achieved through role exclusion mechanisms. However, the policy may also require additional layers of approval, such as having at least two people approve each request.

## Customizable Recertification

Roles, applications, and services are accessible via catalogues. Thanks to the support of multi-dimensional object relationship management, features such as recertification can be applied to any type of object such as identities, roles, organizations, etc. The actors, process, and actions also can be configured flexibly within the unified model.

## SaaS & On-Prem Provisioning

Evidian Orbion comes with a gateway for hybrid environments that allows connecting on-premises and cloud environments.

## Streamline audit and compliance

Evidian Analytics features deliver pre-configured & customizable dashboards and reports to help you identify trends and patterns. These can be on the usage of the solution, highlight suspicious practices and comply with internal audit prerequisites or other compliance requirements. This provides the ability to recover values of objects at a given time in the past and to perform root cause analysis. All of this can be done by operators without technical knowledge.

## Zero Trust

For everyone, always and anywhere, every role must be designed following the least privilege principle. Evidian Orbion Access & Governance helps build the secure foundation necessary for “Zero Trust” by providing a fully featured authentication and access management as-a-service solution.

## Protect REST API

Evidian Orbion allows you to manage access to your secured APIs using industry-recognized standards like OAuth 2.0 and OpenID Connect to provide strong authentication and fine-grained access control. These protocols ensure safe access to online services while offering maximum flexibility to integrate third-party solutions and customize authentication.

## Optimized management of Cloud applications

Evidian Orbion Access & Governance enables you to easily manage the deployment of Cloud applications like Salesforce, Google Apps or Microsoft Office 365 etc. optimizing costs and facilitating deployment.

## Implementation cost control

Cloud based and ready to use, Evidian Orbion Access & Governance significantly reduces deployment time and costs. Upgrades are fully handled by Evidian, which save time for administrators and reduce cost for the company.

Interconnectivity is at the core of Evidian's IAM way of thinking when developing IAM solutions.

To find out more about access-related functionalities, take a look at the Orbion Access flyer.

**User & Right Management**

Governance of joiners, movers & leavers rights

**Single Sign-On**

SSO, Federation and dynamic authorization  
Audit

**Analytics**

Audit, monitoring, powerful dashboards & reporting

**Strong Authentication**

Multi-factor authentication

**Provisioning**

Automatic activation and deactivation

**Access & Governance from a Single Pane of Glass**

**The Right Identity with the Right Privileges at the Right Time**
